INTRODUCTION:

OBJECTIVES:

to provide a high quality training in Community Medicine to the medical students enrolled for MBChB in Al Kindy Medical College to be able to determine the current health situation of the Iraqi society and to identify health priorities. This is done by providing the medical students with:

- 1) Apply competencies and skills in Epidemiology and Statistics in analysis of health indicators.
- 2) use preventive and control measures to control main health problems in the community.
- 3) Understand Basic principles in conducting and evaluation of scientific researches.
- 4) understanding of management skills in health programs
- 5) Know the field of communicable disease controls, mode of transmission, incubation period, susceptibility, and how can we control and prevent it, especially endemic diseases in Iraq.
- 6) Understanding of non-communicable diseases as important emerging global impact, their risk factors, susceptible persons and methods of prevention.
- 7) Understanding for the concept of occupational and environmental health, and therole of safe environmentin health promotion.

VISION.

Community Medicine Module acts to make the student in Al Kindy College of Medicine able to recognize and apply the scientific value and the basic rules of community medicine, and to integrate medical education with scientific research to provide comprehensive health care to solve health problems and promote health for Iraqi society.

MISSION

is to educate medical students to work in today's dynamic healthcare environment and to provide excellence academic knowledge in research and biostatistics methodology for the student in Al Kindy College of Medicine to be able to imagine the importance of the health for individual, family and community with an emphasis on most common health problems in our community for better accommodation and application of preventive programs.
